and (5,561,686) are additionally cited because they are pertinent to the claimed invention.

As per independent claims 1 and 20, Otto (5,859,613) (previously cited) fails to teach a method of discriminating between plural types of mobile transmitters transmitting chirp signals of different slopes wherein the method comprises step of determining mobile transmitter type as a function of a detected chirp slope, in combinations with other limitations recited in the claims. It would not have been obvious for one skilled in the art to implement Otto in view of other prior art of record in order to lead such an implementation to the claimed invention.

As per independent claims 8, 12 and 17, none of prior art of record teaches or suggests a method and an associated system comprising procedures/devices of transmitting and receiving a first type of chirp signal of a first slope and a second type of chirp signal of a second slope, in associated with limitations recited in the claim.

As per independent claim 18, none of prior art of record teaches or suggests a system comprising plural types of receivers and transmitters for receiving and transmitting chirp signals, each type of receiver and transmitter receiving and transmitting a chirp signal of different slope, wherein data id encoded by an offset of the starting frequency of a subsequent chirp signal.

As per independent claim 19, none of prior art of record teaches or suggests a system comprising plural types of receivers and transmitters for receiving and transmitting chirp signals,
